To,
The Recruiter,
SAP Germany

Job Position – Regular Fulltime at SAP

I am excited to apply for fulltime in SAP organization. Presently I am continuing my master Thesis with SAP Globalization services – Localization Toolkit Extensibility as I had already done working/intern with the same team in S/4HANA Cloud. I am also a self-learner as getting trained in SAPUI5/Fiori and ABAP development which drives me into 1 year of business computing modules to be experienced the real-time technology in SAP. During this master's period I had completed with 7 OpenSAP certification and continuing my further interest even other relative certification to enhance real-time exposure. Pursuing higher education has always been a top priority for me as I believe specialization in a field is very important from an educational standpoint. As a young and motivated individual, I would like to express my interest in working with SAP. I got to know about the application through the SAP online job portal. I indulge in culture that made me to learn German language A2 (in process) through SAP. I believe that this opportunity will add another dimension to my learning curve and my contributions will add value to the company and the team.

My real-time experience with SAP around a year from 2019-20 drives me to latest technologies over multiple business computing knowledge (S/4HANA cloud extensibility, ABAP, SAP HANA, SAP Analytics, SAP UI5/Fiori, Jira, on-premise) which had ideally completed in my Master subjects.

- Extensibility utilization of business application as In-app and Side-by-Side for partner/customer using technical and functional knowledge in S/4HANA Cloud application. Providing the demo for partner/customer in the live system.
- Utilization of SAP analytics cloud source for branding of Localization features list to public.
- Self-learning through private online source to get experience in ABAP and SAP UI5/Fiori development

I worked as Oracle ERP Technical Consultant over 2015-17 for modules like orders, procurement, Sales and cash management, financials, Receivables, General Ledger.

- Vast experience in Database as SQL, PLSQL using CRUD operations and packages for oracle ERP and cloud application.
- Experience in RICEWF methodologies in oracle applications.
- Experience in Migration Documentation creation and good exposure towards MS Office.
- Experience in software development life cycle for ERP, CRM and SCM modules (Procurement – Payment & Order – Cash management, Inventory).
- Intern experience in Automation testing (QTP) using SQL and manual testing.

I strongly believe that this role will provide me the intellectual stimulation, guidance and creative energy to work in the field. I can adapt the technology a better way as I already have prior experience with ERP, Middle wares and Database. I am a diligent and a hard- working person and some of my strengths include hard work, strong determination, and excellent communication and interpersonal skills which is essential to create opportunities.

With the cover letter I have also attached my resume for your reference. In case you need any further information, I would be glad to provide you with all the details. I am available via phone and email. Looking forward to hearing from you and work with SAP.

Yours sincerely,

Praveen Kumar Appari
